

### Instructions for cutting & shaping

Cut out the template around the edges and trace the outline on your chosen surface material. After you've painted the mask, cut out the shape on the actual surface material, then make a cut where the solid line is and delicately shape the top of the mask into a shallow cone to a point where the cut mark just reaches the area indicated by the dotted line.

We will apply the ear loops and the backing mechanism for hanging.

Print this page on 8 1/2 x 11" paper, landscape orientation and the mask will come out at the proper size, about 8" across.
